IT Headline Template supports a wide variety of module positions and variations which can be archived automatically by the system. The template has been structured with an amazing set of 32 module positions allowing the template to have extreme versatility and flexibility. The modules are fully collapsible mean that if there are no modules published in particular area, this module position will disappear.

Also you can have 3-Columns layout (content and left and right), 2-Columns layout (content and left or right), 1-Column layout (only content). The width for the left and right columns can be seted through the Template Manger in J! Administrator. There you can set also the background and border for the left and right columns.
