   DISCLAIMER! This document is nothing more than the musings of the author as he attempts to perform the stated tasks. Conclusions and approaches
may very well be incorrect, inefficient, or otherwise outside of professionally accepted best practices. Use this document at your own risk! In this
document, screen outputs will be presented in **green**. Where keyboard input is required, the prompt will be in bolded red.   **#** means you should be at the
super user prompt, **$** means you should be at an unprivileged user prompt. Do not include these prompts in your input! The command to be typed will be
shown in **blue**.
 # ls -al
means you type ls -al at the super user prompt.
The Plan is to build the network illustrated below, using SPARC based hardware, the Solaris 10u11 operating system, Sun Ray 5.3.1 server/client software and Dsee7 LDAP services. The goal is that we have a functioning and patchable network that utilizes alternate boot environments, ZFS snapshots and flar imaging for backups and upgrades.
